# HOW CLOUD TECHNOLOGY HELPS MODERN DAY TREASURERS

## Leave Legacy Technology Behind

Spreadsheets simply do not provide the kind of visibility a modern-day treasurer needs. They are error-prone, disjointed and unreliable.

## Seamless Integration

Seamlessly integrate with other best-of-breed solutions and ERP systems through APIs. This functionality supports treasurers for FX and hedging transactions and operations.

## Game-Changing Cloud Technology

Gain access to game-changing technologies like AI/ML and Blockchain by moving to cloud. Navigate through complexities of treasury operations with greater ease.

## Pay as You Go Model

Realize quick returns with cloud technology. The opex model enables you to pay as you go so you don't have to worry about huge up-front costs when it comes to leveraging next-level technology.

## Comprehensive, Real-time Visibility

Gain comprehensive, real-time visibility of cash and liquidity positions. Make informed decisions and take advantage of market opportunities. Drives better collaboration between stakeholders with shared visibility.

## Version Control

Maintain multiple, easily accessible versions of reports including actuals and planned. These multiple versions drive more informed decision-making and eliminate confusion.

## Access to The Latest Analytical Tools & Visualization

Gain powerful and accurate forecasting capabilities with the latest predictive analytics and visualization tools. Graphical visualization makes it easy to comprehend the results of analysis.

## Handle Complex Regulations

Ensure compliance with the help of cloud. Improved data intelligence and visibility from the cloud helps treasurers navigate complex regulations like GDPR and International Financial Reporting Standards.
